

Massachusetts Test Score Data

Description

The dataset contains data on test performance, school characteristics and student demographic backgrounds for school districts in Massachusetts.

Usage

```
data("MASchools")
```

Format

A data frame containing 220 observations on 16 variables.

district

character. District code.

municipality

character. Municipality name.

expreg

Expenditures per pupil, regular.

expspecial

Expenditures per pupil, special needs.

expbil

Expenditures per pupil, bilingual.

expocc

Expenditures per pupil, occupational.

exptot

Expenditures per pupil, total.

scratio

Students per computer.

special

Special education students (per cent).

lunch

Percent qualifying for reduced-price lunch.

stratio

Student-teacher ratio.

income

Per capita income.

score4

4th grade score (math + English + science).

score8

8th grade score (math + English + science).

salary

Average teacher salary.

english

Percent of English learners.

Details

The Massachusetts data are district-wide averages for public elementary school districts in 1998. The test score is taken from the Massachusetts Comprehensive Assessment System (MCAS) test, administered to all fourth graders in Massachusetts public schools in the spring of 1998. The test is sponsored by the Massachusetts Department of Education and is mandatory for all public schools. The data analyzed here are the overall total score, which is the sum of the scores on the English, Math, and Science portions of the test. Data on the student-teacher ratio, the percent of students receiving a subsidized lunch and on the percent of students still learning english are averages for each elementary school district for the 1997–1998 school year and were obtained from the Massachusetts department of education. Data on average district income are from the 1990 US Census.
